

- **Gastric Health**

Added Fossilised Red Sea algae (porous form of Calcium) Additional calcium affects a family of proteins called claudins, these act to effectively close the tight junctions in the gut, this has huge implications toward healthy gut function in horses.

- **Prebiotic**

Added Yeast metabolite feeds microbes. A great source of available amino acids and B group vitamins

- **Hoof Health**

Added Biotin or vitamin B7. Responsible for the production of Keratin for strong healthy hooves. Proven to improve hoof quality

- **Balanced Multi Mineral**

Chelated and Balanced for New Zealand horses, by New Zealander's, right here in New Zealand!

## CALCI-HŌIHO

### *Not Just Calcium!*

Abundant in the North, kikuyu is an easily available and economical fibre source. The issue we face is the calcium deficit that kikuyu and other forages high in oxalate bring to the table. High oxalate pastures have the ability to draw calcium from the body. Once easily available calcium is no longer accessible, the body will then start to tap deeper into the skeletal system to draw what it needs to replace the body's deficit. It is an issue that can lead to a huge variety of problems, physically, digestively and behaviourally. This issue is relevant to hōiho of all breeds and disciplines.

**Calci-Hōiho** is suitable for all disciplines including: Breeding stock, lactating mares, young stock, taonga (old stock) and hōiho in heavy mahi being. Calcium is also required for hōiho recovering from bone injury, ill health, pregnant or lactating mares and growing young stock.

Balanced and absorbable minerals play a huge role in the wellbeing of your equine.

We've got you covered with **Calci-Hōiho!**

Professionally and specifically formulated for your NZ hōiho and poni.
